

Brainergy Park

EXEMPLARY SYNERGIES FOR THE ENERGY TURNAROUND.

The three partner municipalities of **Jülich, Niederzier and Titz as well as the district of Düren** are developing an innovative special area of around 7 hectares in the **52-hectare** intermunicipal industrial park Brainergy Park Jülich, which will focus on the topics of **new energies and energy transition**. Accordingly, a simulation area and demonstration platform for the energy management of the future will be created, the centerpiece of which will be a 7,500 m² central building - the **Brainergy Hub**. This will provide the area with state-of-the-art heating, energy, cooling and internet and also offer attractive business premises to start-ups and companies from the energy sector.

The mayors of the partner municipalities Axel Fuchs, Frank Rombey and Jürgen Frantzen emphasize that the successful and exemplary intermunicipal cooperation and the integration of the unique regional research landscape of the Aachen University of Applied Sciences, the Jülich Research Center and the DLR provide a realistic opportunity to implement a business park that is unique in Germany.
